BROWN'S OAKRIDGE EXOTICS  
Inspection  
Type: ROUTINE INSPECTION  
Date: JAN-22-2003

### 3.127

#### FACILITIES, OUTDOOR.

(b) Shelter from inclement weather. Natural or artificial shelter appropriate to the local climatic conditions for the species concerned shall be provided for all animals kept outdoors to afford them protection and to prevent discomfort to such animals.

\*\*\*One of the small deer that is in poor condition (unknown reason, is under veterinary care) was seen shivering in the cold weather. There is a two -sided shelter with bedding available and being used by the deer, but a third side is needed to break the wind. The owner will also provide additional bedding.

Correct by: January 22, 2003

### 3.131 ( a )

#### SANITATION.

(a) Cleaning of enclosures. Excreta shall be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors.

\*\*\*Only one pen, containing the lion, has not been cleaned out. The owners are working on constructing a shift pen so that the lion can be moved over and the enclosure adequately cleaned in safety.

Correct by: March 15, 2003

Inspection was conducted with [REDACTED] and [REDACTED]

Previous noncompliant items that have been corrected:

#### 2.40 (a) Attending Veterinarian and Adequate Veterinary Care

[REDACTED] had been to the facility, had signed a Program of Veterinary Care, and had checked on the whitetail deer and the bobcats.

## INSPECTION REPORT

SKINGSTON  
2862 cust\_id  
302099 insp\_id  
6668 site\_id

[REDACTED] felt the bobcats were in adequate condition. For the whitetail deer, grain/pellets will be available at all times, and a necropsy of at least one of the poor-doers will be done. The deer were given grain and pellets in front of the inspector and AV, and the deer picked at the feed. A necropsy is necessary to determine if there is a problem that can be resolved.

The donkey's hooves will be trimmed per [REDACTED] recommendation.

## 3.125 (a) (c) (d) Facilities, General.

Bobcats have been moved to a new enclosure that is of appropriate structural strength and the primary enclosure is big enough to hold all the bobcats comfortably. Bedding is in the housing for conservation of body heat.

A top was put on top of the grain containers.

Waste disposal has been accomplished for all of the enclosures except for the lion pen.

## 3.17 (b) (c) (d) Facilities, Outdoor

The bobcats have a new shelter that is large enough for all animals and contains bedding.

The donkey and boar have a three sided shelter with bedding.

A perimeter fence has been placed around the around the tigers, bear and the lion.

Drainage has been enhanced by the addition of more gravel. However, there is a light snow on the ground, and it is difficult to tell if enough has been added. In the spring, after some rain, more gravel or some other method of drainage may be necessary.

## 3.128 Space Requirements

The shelter for the fallow deer has been extended so that there is enough room for all of the animals.

## 3.131 (a) (d) Sanitation

All enclosures except the the lion enclosure have been cleaned out.

The owners are working with a pest control company to establish a pest control program. The old rodent holes still need to be back-filled.
